# MONTHLY WEATHER MAP

## METEOROLOGICAL SERVICE, DOMINION OF CANADA

## MARCH 1935

### TEMPERATURE

Except in Ontario, southern Manitoba and portions of southern Saskatchewan, the mean temperature of the month was below the normal March temperature in Canada and Newfoundland.

In British Columbia in the southern interior valleys temperatures were one to two degrees below normal and on Vancouver Island two to three degrees below normal. Along the north coast and in the upper interior the deficiency ranged from five to ten degrees.

In Alberta the deficiency was three to five degrees in the southern portion of the province. North of Calgary the deficiency increased to eight or ten degrees in Edmonton district while further northwest in the Peace River country temperatures were nine to fourteen degrees below normal. In the Lower Athabasca and Peace River valleys the deficiency was about three degrees.

In Saskatchewan that portion of the Grain Belt lying between the north and south branches of the Saskatchewan River reported mean temperatures one to three degrees above normal. In the southeastern portion of the province also temperatures varied from normal to two or three degrees above normal. In the extreme southwest and also along the North Saskatchewan River from Lloydminster to Battleford temperatures were one to three degrees below normal.

In Manitoba the excess over normal temperature was four degrees in the Red River valley and the lower portion of the Lake region. In the Qu'Appelle and Assiniboine valleys the excess was much smaller. North of the Lake region temperatures were normal but in the far north were two degrees below normal.

In the region of Ontario immediately north of Lake Superior there was an excess of four to seven degrees. In a small area immediately east of the Lake of the Woods the excess was only one degree. In the Lower Lake region the excess was three to seven degrees and in the Ottawa and Upper St. Lawrence valleys one to five degrees. From Lake Temiskaming northward to James Bay temperatures varied from normal to three degrees below normal.

In Quebec in the vicinity of the confluence of the Ottawa and St. Lawrence Rivers temperatures were nearly normal or slightly higher. In the Laurentian hills north of the river the deficiency varied from one to five degrees and in the Lake St. John region from one to three degrees. Along the Lower St. Lawrence from Quebec City to the Gaspé Peninsula mean temperatures were about one degree below normal. On the Island of Anticosti and on the north shore of the Gulf the deficiency was four degrees or more.

In New Brunswick mean temperatures were for the most part two to four degrees below normal with local exceptions where normal temperatures were reported. In Prince Edward Island, Cape Breton Island and the eastern portion of the Nova Scotian mainland there was a deficiency of three to four degrees but on the southwestern portion of the mainland the deficiency was only one or two degrees. In Newfoundland the deficiency was generally four to five degrees. On Belle Isle, however, mean temperatures were normal.

In Hudson Strait the month was six degrees colder than a normal March and on the western coast of Hudson Bay two to three degrees below normal.

### PRECIPITATION

In British Columbia the precipitation was generally well above normal. Some localities on Vancouver Island and in the Lower Fraser valley reported an excess of fifty to one hundred per cent. In the southern interior valleys the excess was generally small. On the north coast there was a deficiency of fifty per cent. or more.

In Alberta the precipitation was generally below normal except in the most southerly portion of the province. In the region of the Bow and St. Mary Rivers the excess varied from ten to one hundred per cent. but was generally less than fifteen per cent. Locally in the region from Edmonton to the Peace River there were moderate excesses. The greatest deficiency occurred in the central portion of the Grain Belt where the precipitation varied from a negligible amount to approximately fifty per cent. of the normal.

In Saskatchewan over most of the southern part of the Grain Belt and locally in the eastern portion of the cultivated region there was a moderate excess. In the central farming districts, however, where the normal amount for March varies generally from a half to three-quarters of an inch, the actual amount recorded varied from two to seven-tenths.

In Manitoba the precipitation was generally well above normal and in some sections twice to three times the normal amount was recorded.

In the region of the Lake of the Woods northward to the Albany River precipitation was locally heavy, some points reporting two or two and a half times the normal amount. On the higher lands between Lake Superior and the Albany River there was a small deficiency. East of Lake Superior to the Abitibi River there was an excess of twenty to fifty per cent. From Lake Temiskaming southward and westward to Manitoulin Island there was a deficiency of twenty per cent. or more. In the Georgian Bay counties precipitation was nearly normal except along the south shore of the Bay where there was a deficiency. Generally over the Lower Lake region and the Upper St. Lawrence and Lower Ottawa valleys precipitation was deficient. The deficiency varied from ten per cent. to fifty per cent. but from Lake Ontario eastward to the Ottawa valley was generally about thirty per cent.

In the region immediately east of Montreal the precipitation was nearly normal and the same was true of stations along the River as far as Quebec. Immediately north of the Ottawa River and in a portion of the Lower St. Lawrence valley there were deficiencies of ten to thirty per cent. On the Height of Land from Lake Abitibi eastward nearly to Lake St. John precipitation was well above the normal amount. From the Saguenay River eastward to the Gulf along the north shore precipitation was also deficient.

In the Atlantic Provinces precipitation was scanty for the most part. Deficiencies ranged from five to sixty per cent. in New Brunswick and from ten to forty per cent. in Prince Edward Island and Nova Scotia. Locally in Victoria county, New Brunswick, there was an excess of seven per cent., while Digby County, Nova Scotia, reported an excess of twenty-eight per cent.

A. J. CONNOR

# SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Tm is the mean temperature of the current month; Column Sg denotes depth of snow on ground in inches, where given.
